Homo Sapiens Demo Stones

Visconti presents a new edition of the Homo Sapiens collection inspired by the beauty of the colored gemstones.

INSPIRATION

Seductive transparencies and harmonious proportions meet the iconic design of the Homo Sapiens collection. Our continuous research has led us to ask: can matter be ethereal? The answer is in the new Homo Sapiens Demo Stones pen. Its true power is born out of its natural encounter with light, which gives life to its transparency, density, splendour and fluidity.

For the colours of the Homo Sapiens Demo Stones collection, we were inspired by the beauty of the most sought-after coloured gems. Emerald for dark green, sapphire for deep blue and ruby for intense red. Rubies, sapphires and emeralds have been admired for their rich colours for thousands of years.

TECHNIQUES & MATERIALS

Each Demo Stones pen is designed, made and polished in our Florentine workshop. The barrel and cap are made in fine acrylic resin and carefully hand-polished, both inside and out, with special felt tools, to guarantee an excellent result. This process requires all the skill and expertise of our most experienced craftsmen.

Our ability to make beautiful demonstrator pens is renowned around the world. We have set ourselves the challenge of making perfection visible. Transparency is not purely an aesthetic choice, but also a way to reveal the beating heart of our demonstrator pen.

In the "Demo Stones" edition, the semi-transparent colours reveal the soul of this exceptional writing instrument: the Power Filler Double Reservoir filling system, patented by Visconti in 1998.

The new Homo Sapiens Demo Stones collection is enriched by coloured stones placed on the pen cap: green agate, blue agate and carnelian stone emulate the three inspirational gem colours of the pen's body. In addition, the pen can be personalised with "My Pen System" magnets at the bottom of the barrel.

The bridge clip of the Demo Stones rollerball pen is engraved with the Visconti logo and embellished with a tone on tone enamel. The band on the barrel is engraved with the collection's name: "Homo Sapiens".

Box-12
